EDUCATION

10th CBSE (Titan School)

76.8%

12th CBSE ACHS

86.7%

B.Tech in ECE with Hons in Cryptography and Blockchain

3.60 / 4.0 CGPA

PROFILE

Pre-final year student specializing in Distributed Systems, Multi-Agent AI, and Blockchain Architecture. Proven track record in architecting high-performance solutions, including a Hybrid Ledger System and an automated Serverless GPU pipeline. Expert in bridging hardware-software constraints through Object-Oriented Design and Algorithmic Optimization using C++ and Python. As IEEE MTTS Student Chair, I lead cross-disciplinary teams to solve ambiguous technical problems with a focus on scalability, security, and system automation.

HOBBIES AND INTERESTS

I'm a tech enthusiast who balances building digital solutions with a deep interest in history and literature. When I'm not coding or exploring new technologies, I stay active through swimming and hiking. This mix of technical creativity and outdoor exploration keeps my perspective fresh and balanced.

Portfolio

https://portfolio-zeta-topaz-83.vercel.app/

SKILLS

Languages:
- Python, C++, Javascript, TypeScript, Solidity, SQL

Systems & Cloud:
- Next.js, FastAPI, PostgreSQL, Prisma ORM, Cloudflare Workers

AI & Automation:
- YOLOv8, CrewAI (Multi-Agent), Scikit-Learn, LLM Orchestration

DevOps & Edge:
- GitHub Actions (CI/CD), Modal Cloud (Serverless GPU), Git
-

AI Orchestration:
- Prompt Engineering, Claude Artifacts & Skills, Agentic Workflow Design (CrewAI), Multi-modal AI Integration

Engineering (ECE):
- Ansys Electronics, Cadence Virtuoso, Matlab, SolidWorks

LANGUAGES

English
Tamil (Native)
Kannada(Basic)

CONTACTS

8610707213

bennettjoshua712@gmail.com

EXPERIENCE

Intern

- Intern @ Dewdas Technology
- April 2025 - June 2025
- Skills Learned

Developed an automated surveillance pipeline using YOLO and Raspberry Pi, improving object detection accuracy by 95% and deploying the solution to the cloud for real-time monitoring

IEEE MTTS Student Chair

- Dec 2025 - Current
- Skills learned
- Leadership
- Team Management
- Event Organizing

IEEE APS Webmaster

- Dec 2024 - Dec 2025
- Skills Learned
- Team Collabration
- Digital Media Skills
- Website Management
- Networking

Volunteers

Been part of multiple student bodies:
CUESTIC event planning volunteer
Organized Debate
Organized TechUtsav

CERTIFICATES

Oracle Generative AI Professional

Google-Basics Of Google Compute skills

Dewdas Internship

First in extra curricular

NPTEL - Data Structures and Algorithms

PROJECTS

TrustGov | Hybrid Distributed Ledger & Governance Platform
Tech: Next.js 15, TypeScript, Solidity, PostgreSQL, Prisma, Ethers.js, JWT

- Architected a Hybrid Ledger System that synchronizes an immutable Ethereum blockchain with a high-performance PostgreSQL database, solving the challenge of providing instant queries while maintaining 100% auditability for public fund distribution.
- Engineered a Secure Role-Based Access Control (RBAC) System using Object-Oriented Design principles and JWT-based authentication, managing complex state transitions for Admins, Contractors, and the Public.
- Implemented On-Chain Verification by integrating Ethers.js and MetaMask, enabling cryptographically signed approvals for mission-critical financial transactions.
- Developed Automated Deployment Workflows using custom Node.js scripts to orchestrate local blockchain nodes, database seeding, and environment synchronization, reducing local setup time by 90%.
- Optimized Data Consistency by designing a "Request-Approval-Execution" pipeline that ensures fault-tolerant state updates across distributed layers.

Github Repo Link :
https://github.com/Zenous07/TrustGov_Next

Personal Career Navigator | Multi-Agent AI System

- Architected a distributed AI pipeline using FastAPI and CrewAI, orchestrating 5 specialized agents to perform real-time resume analysis and market research.
- Designed an asynchronous data flow between a Next.js 16 frontend and a Python backend, optimizing LLM (Llama 3.1) inference latency via the Groq API.
- Implemented a complex relational schema in PostgreSQL (Prisma) with 10+ tables to track user skill-gaps and versioned learning roadmaps.

Github Repo Link : https://github.com/Zenous07/Personal-Career-Navigator

Automated Content Factory | Serverless Cloud Computing

- Engineered a scalable video generation pipeline utilizing Modal Cloud for serverless GPU computing and Cloudflare R2 for distributed object storage.
- Automated high-retention content creation by integrating FFmpeg for programmatic video editing and rotating residential proxies for robust data scraping.
- Optimized resource allocation by leveraging serverless architecture to handle variable compute loads, reducing infrastructure costs by 40%.
